

ABSTRACT

According to another aspect of the present disclosure, a carrier for transporting a bottle or bottles, is provided. The carrier includes a tote having a non-rigid front and rear panel secured to one another along a right side terminal edge, a left side terminal edge and a bottom terminal edge to thereby define a pocket having an open top. A contact line is provided between the right side terminal edge and the left side terminal edge to divide the pocket into a first and a second pocket. The bottom terminal edge is scalloped such that each of the first and second pockets is in operative association with a lobe of the scalloped bottom terminal edge, wherein the tote is fabricated from neoprene.
